RELEASED MATHEMATICS ITEMS

This book contains the released Trends in International Mathematics and Science Study (TIMSS) 2011 grade 8 mathematics assessment items. This is not a complete set of all TIMSS 2011 assessment items because some items are kept confidential so that they may be used in subsequent cycles of TIMSS to measure trends.

How Can This Set of Released Items Be Used?

In Teacher-designed Assessments. The items in this book present different ways of measuring students' understanding in various content and cognitive domains. A teacher may use these items to create an assessment according to the needs of the class after reviewing the items and selecting items of interest.

For Feedback on Student Understanding. Student responses can be scored according to the scoring information provided in the book. Items that coincide with concepts taught in class allow the teacher to gain feedback on the students' understanding of assessed concepts. For example, a teacher might decide to examine the incorrect or partially correct responses of the class. The teacher might use the items to identify particular difficulties or misconceptions experienced by individual students, which can serve as the basis for some remedial teaching or focused practice.

To Benchmark Student Performance. The teacher might also compare the percent of students in the class who responded correctly to an item with the percent of students who responded correctly to the same item in other education systems or in the United States.

TIMSS and PIRLS are copyrighted and are registered trademarks of IEA. Released items from TIMSS and PIRLS assessments are for non-commercial, educational, and research purposes only. Translated versions of items remain the intellectual property of IEA. Although the items are in the public domain, please print an acknowledgement of the source, including the year and name of the assessment you are using. If you publish any part of the released items from TIMSS 2011, please use the following acknowledgement:

USER'S GUIDE

Grade 8

This book contains TIMSS 2011 released items for grade 8. Each item appears on a single page, on which is provided information about the item's classification and about international student performance on the item. The items appear in the content domain order, as shown in the index on the next page.

Information about item classification

Take a look at the first item on page 1. Across the top are three boxes which identify the item's **content domain** (the subject matter in mathematics that the item assesses), its **main topic** (the specific topic assessed within that subject matter), and its **cognitive domain** (the cognitive or thinking process assessed). For this item, the content domain is number, the main topic is fractions and decimals, and the cognitive domain is applying.

Below the row of boxes and above a boxed-in area of the page is the **item label**. For this item, it is *Ann and Jenny divide 560 zeds*. Below the boxed-in area is the item number, which is more commonly used to identify each item than the item label. Within the boxed-in area is the item as it appeared in student test booklets.

Correct answers are shown beneath each item. The correct answer for multiple-choice items is simply a letter code. For example, in the item *M032094* on page 3, the letter code A is the correct answer. The correct answers for write-in or open-ended items are explained in a scoring guide. For example, the *Ann and Jenny divide 560 zeds* (page 1) provides an example of a scoring guide, indicating the general nature of correct and incorrect

responses. In some cases, partial credit may be awarded and these items will provide guidelines for fully correct, partially correct, and incorrect responses. Sample student responses are provided for some of the constructed-response items for each scoring category.

Information about international student performance

In the table along the right-hand side of the page are the **percent correct** statistics for the item. These consist of statistics on the percentage of students in each education system who could answer the question correctly. The lists of education systems are ordered in terms of this percentage. The international average is included as well.

To the right of some of the percent correct statistics are **special symbols** that indicate when an education system scored significantly higher or significantly lower than the international average. Thus, on the item *Ann and Jenny divide 560 zeds* as an example, an estimated 25 percent of U.S. students could correctly answer this item, a percentage that was not measurably different than the international average, after taking into account the standard of error associated with the percent correct statistic for the United States and for the international average.

Content Domain	Page	Content Domain	Page
Number		Algebra (continued)	
M032064	Ann and Jenny divide 560 zeds1	M042236	Simplify the expression62

Express $256 \times 4,096$ as power of 4

Look at this table:

4^1	4^2	4^3	4^4	4^5	4^6
4	16	64	256	1,024	4,096

Use the table to express the value of $256 \times 4,096$ as a power of 4.

- A. 4^{10}
- B. 4^{16}
- C. 4^{20}
- D. 4^{24}

Red&BlackTiles_Complete table

Pat has red tiles and black tiles. Pat uses the tiles to make square shapes.

The 3×3 shape has 1 black tile and 8 red tiles.

The 4×4 shape has 4 black tiles and 12 red tiles.

B = Black tile

R = Red tile

The table below shows the number of tiles for the first three shapes Pat made. Pat continued making shapes using this pattern. Complete the table for the 6×6 and 7×7 shapes.

Shape	Number of Black Tiles	Number of Red Tiles	Total Number of Tiles
3×3	1	8	9
4×4	4	12	16
5×5	9	16	25
6×6	16		
7×7	25

Red&BlackTiles_Shape with 49 tiles

Red and Black Tiles (Continued)

Use the patterns in the previous table to answer the following questions.

B. Pat made a shape that used 49 **black** tiles.
How many **red** tiles did Pat use in that shape?

Answer: _____ red tiles

Item Number: M032760B

Red&BlackTiles_Figure n

Pat wanted to add a line to the table showing how to find the number of tiles needed to make a square of any size. Use the patterns in the table on the opposite page to help you complete the line for shape $n \times n$ in the table below.

Shape	Number of Black Tiles	Number of Red Tiles	Total Number of Tiles
$n \times n$	$(n - 2)^2$		

Item Number: M032761

SCORING**Correct Response**

- Both expressions correct in simplified form

Red tiles: $4(n - 1)$; $4n - 4$; or correct verbal expression

Total tiles: n^2 , $n \times n$; or correct verbal expression, such as “square the number” or “multiply by itself”

- Both expressions correct with expression for red tiles in the form of total number of tiles minus number of black tiles e.g., $n^2 - (n - 2)^2$ or equivalent.

Partially Correct Response

- Expression for red tiles correct as in 20 but not expression for total tiles
- Expression for total tiles correct as in 20 but not expression for red tiles

Incorrect Response

- Incorrect expression including n for red tiles or total or both (includes incorrect attempts to express red tiles as difference from total tiles)
- Other incorrect (including crossed out, erased, stray marks, illegible, or off task)

What is the value of x and y

$x + y = 12$ and $2x + 5y = 36$.

What are the values of x and y ?

A. $x = 2, y = 10$

B. $x = 4, y = 8$

C. $x = 6, y = 6$

D. $x = 8, y = 4$

Length of the longest wood piece

A piece of wood was 40 cm long.
It was cut into 3 pieces.
The lengths in cm are

$2x - 5$

$x + 7$

$x + 6$

A. What is the length of the longest piece?

Answer: _____ cm

B. Show your work. If you use a calculator, you still must describe all the steps you used to obtain your answer.

Item Number: M052002

SCORING**Correct Response**

- 15, with $4x + 8 = 40$ or equivalent algebraic reasoning shown

Partially Correct Response

- 8, with correct working shown or indication of $x = 8$ with correct working
- $x + 7$, with correct working shown or indication of $x = 8$
- 15, with numerical (i.e., non-algebraic) reasoning shown

Incorrect Response

- 15 or $x + 7$ with no/incorrect work shown
- Other incorrect (including crossed out, erased, stray marks, illegible, or off task)

Mark the points B and C on graph

The diagram shows a system for locating points

In this system, the position of a point P is described by its distance from origin, O , and the amount of counterclockwise turn from a baseline OA to OP . Thus, the coordinates of P are $(5, 340^\circ)$.

A. Mark the points $B(3, 30^\circ)$ and $C(4, 120^\circ)$ on the graph above.
 B. Draw the angle BOC . What is the measure of angle BOC ?

Angle $BOC = \underline{\hspace{2cm}}^\circ$

Item Number: M042300Z

SCORING

Note: Two score points will be given if both parts A and B are correct. One score point will be given if only part A is correct. No credit is given if only part B is correct.

M042300A

Correct Response

- Both points correctly marked (pictured on right)

Incorrect Response

- One point correctly marked
- Other incorrect (including crossed out, erased, stray marks, illegible, or off task)

How likely to get pink candy

A machine has 100 candies and dispenses a candy when a lever is turned. The machine has the same number of blue, pink, yellow, and green candies all mixed together. Megan turned the lever and obtained a pink candy. Peter turned the lever next.

How likely is it that Peter will get a pink candy?

- A. It is certain that his candy will be pink.
- B. It is more likely than it was for Megan.
- C. It is exactly as likely as it was for Megan.
- D. It is less likely than it was for Megan.

Make a pie chart with labels

Of the 400 students in a school, 50 plan to go to university, 100 to a polytechnic school, 150 to a business college, and the remainder plan to enter workforce.

Use the circle below to make a pie chart showing the proportions of students planning to do each of these. Put labels on your chart.

Item Number: M032695

SCORING

Correct Response

- Pie chart correctly divided and labeled

(1 section – university; 2 sections – polytechnic; 2 sections – workforce; 3 sections – business college)

Partially Correct Response

- Four sections with at least two, but not all, of correct size and correctly labeled
- Four sections of correct size but no labels, or labels 50, 100, 150, 100

Incorrect Response

- Four sections with one or none of correct size
- Other incorrect (including crossed out, erased, stray marks, illegible, or off task)

Chance of getting a button

There are 10 red, 8 blue, and 4 white buttons in a bag. What is the chance of taking out either a blue button or a white button?

- A. $\frac{4}{22}$
- B. $\frac{8}{22}$
- C. $\frac{10}{22}$
- D. $\frac{12}{22}$

How likely student voted for Pat

Pat and Chris were candidates for school president.

Here are the election results:

Pat 80%

Chris 20%

How likely would it be for a student asked at random to have voted for Pat?

A. It is certain that the student voted for Pat.

B. It is likely that the student voted for Pat.

C. It is unlikely that the student voted for Pat.

D. It is certain that the student did not vote for Pat.

Long jump competition

The results of a long jump competition were reported as follows:

Average Length

Team A 3.6 m

Team B 4.8 m

There were the same number of students in each team.

Which statement about the competition **MUST** be true?

- A. Each student in team B jumped farther than any student in team A.
- B. After every student in team A jumped, there was a student in team B who jumped farther.
- C. As a group, team B jumped farther than team A.
- D. Some students in team A jumped farther than some students in team B.

DATA AND CHANCE	Data Interpretation	Reasoning

Age structures of country X and Y

Comparison of Age Structure Between Country X and Country Y

Country X Age Distribution
Rapid Growth

Country Y Age Distribution
Slow Growth

■	Ages 0–19	Going to have children
□	Ages 20–44	Having children
▨	Ages 45–89	Finished having children

The graphs for Country X and Country Y show the age structure of each country's population. The population is divided into three age groups from youngest to oldest. The graphs enable predictions about population growth.

A. Why could the age structure of Country X lead to more rapid population growth than the age structure of Country Y?

Item Number: M052503A

SCORING

Correct Response

- Within Country X there is a larger percentage of people in the “having children” or “going to have children” categories than in Country Y.

Note: The reference to country X needs to be clear. The comparison with Country Y does not need to be stated.

Also, accept “more people” as “proportionately more” and “young or younger” in place of “having children” or “going to have children”

Examples: Country X has more people about to have children or having children than country Y

- There are more people going to have children in country X
- More young people in country X

Incorrect Response

- Incorrect (including crossed out, erased, stray marks, illegible, or off task)

Examples: There are more “going to have children”

Country X has more population compared to country Y

DATA AND CHANCE	Data Interpretation	Reasoning

Problem of taking care of elderly

Item Number: M052503B

SCORING

Correct Response

- Within Country Y, there is a relatively larger population of elderly people (“finished having children”) compared with younger populations.

Note: The comparison between older and younger people must be made or implied.

Country X and Country Y do not have to be mentioned.

Examples: More older people than younger people

Not enough young people to take care of the elderly

Less number of people “having children” to keep up the population

Aging population, less youngsters, lesser workforce

Incorrect Response

- Incorrect (including crossed out, erased, stray marks, illegible, or off task)

Examples: There are many more elders in Y than X

Country Y has a wider range of not having children than country X
